

Name : Trellick Tower  
Architect : Goldfinger, Ernö

Concrete wall:

Concrete is a composite material composed of coarse granular material (the aggregate or filler) embedded in a hard matrix of material (the cement or binder) that fills the space among the aggregate particles and glues them together

It can be cast into any form which is why it has been used in this instance to cast an edge with an angle you can lean against.

In this case a layer of cement and larger aggregate pieces has been added to the surface of the parapet.
