FRONT

## National Theatre

The National Theatre has been remodelled and refurbished, including the creation of the Max Rayne Centre, which contains a state-of-the-art scenic art studio.

The theatre's workshops have been remodelled to include a public viewing gallery, and workshop space converted to create the Clore Learning Centre.

The Cottesloe Theatre – renamed the Dorfman – has been modernised, and its foyer upgraded.

The north-east corner of the river frontage – formerly the service yard – has been converted to bars and cafés, with the construction of a café atrium facing the river.

The main entrance has been remodelled to create a new entrance, the Sackler Pavilion, while public foyers have been refurbished. Landscape and terraces have been redesigned.

Sustainability enhancements include fabric upgrades, a combined heat and power unit, and a ground source heat pump installation to the Max Rayne Centre.
